(54) REAR VIEW DISPLAY DEVICE FOR CAR

(57) Abstract:

PURPOSE: To accurately and easily check the rear view of a car while it is being driven by detecting the picture of the rear view using a TV camera and displaying the picture on a flat picture display section provided at the position of a room mirror depending upon the operating conditons

CONSTITUTION: TV cameras 3aW3c detecting the rear view that can be seen through a rear window 2 are installed on the roof surface that is located almost at the center of a car room 1, and TV cameras 4aW4c detecting the rear dead angle view are installed near the rear bumper of the car rear. Besides, a mirror housing 6 is mounted on the front roof position that is the inside of the front glass 5 of the car room 1 and a flat CRT with display screens 7aW7c is incorporated at the side facing the inner part of the car room. Besides, the picture of the view detected by the said TV

cameras 3aW3c or 4aW4c is selectively displayed on display screens 7aW7c by the operation of a switching means (not illustrated).
